## MISSIONARY LOW-BAND DXPEDITIONING AT Z81X

DXers travel the world and often take more than they give. Supplies and facilities are limited; the locals, time after time, give all they have. Missionary DXpeditioning is to challenge this equation. Its success is measured by the smiles of local people.

The Z81X expedition was one of those. Establishing a solid regulatory framework and a frequency table, yet another administration was shown amateur radio in a positive light. A foundation was laid for locals to pick it up where the DXpedition had left off. All travelers have this option; it adds nicely to our overall agenda.

Not only did we experience these wonderful occasions, but also qualified for IARU, ARRL and Yasme Foundation participation — all great assets in DX.

As the first essentially low-band operation, our targets were 1500 QSOs (160M) and 2500 QSOs (80M) with a focus on Japan and the USA. A massive low-band machine was built with great care and needed expertise. With all targets exceeded, we are happy to report almost 50.000 QSOs in the books.

We were also happy to assist locals — Massimo, Z81B (IZØEGB) and Diya, Z81D (Y11DZ) — for a stronger on-air presence and encouraged them to include amateur radio as part of their valuable dealings with locals.

The Z81X team is now back home with a great experience under their belts.
